PROJECT INFO:

Client: School

Location: NJ

Old and New

There is something satisfying about seeing a renovation from start to finish. It's even more gratifying to see the before and after comparisons.

AMCASE® had the privilege of being a part of this school's science lab remodeling project. Though the lab had been in place for a number of years, everything needed to go...everything except the hardwood floors. The floors were refinished, retaining some of the old while ushering in the new with modular casework to create a uniqueness all its own.

Before

After

FUN FACTS

30+ - number of years the science lab millwork furniture was in service.

10-25 - average lifespan in years for lab furniture.

Extreme Makeover

THE CHALLENGE

This was an extensive project which required coordinating multiple trades to renovate the entire science room lab from top to bottom. New piping had to be run, along with refinishing the existing hardwood floors and repainting the walls before the casework could be installed.

THE AMCASE® SOLUTION

Good communication, patience, and coordination between the trades was essential due to the plumbing, electrical, and gas lines that needed to be installed or modified to work properly with the casework installation. The transformation was remarkable, and the results were immediately evident. Every solution is different; that's why there's AMCASE®.
