

“FLIPPING YOUR LID” CAN BE A GOOD THING

PROJECT INFO:

Client: Community College

Location: New York

In fact, students at this Community College will find it quite useful in managing their work spaces. These AMCASE® work stations were designed for a lab classroom environment. Pulling the keyboard tray out triggers the flip lid to open by itself. When desk space needs to be reclaimed for book work or study applications, monitor, keyboard, and mouse devices can be quickly stored away. Laptop applications are also available.
