

CURVY NURSE STATIONS

PROJECT INFO:

Client: Hospital

Location: Virginia

AMCASE® was hired to build a unique series of rounded nurse stations and curved-top base cabinets for this hospital. While the curvy design increased cost, our price point was attractive. Layout, durability, and modularity were important to our client due to the high-use nature of hospital settings and the potential to modify things down the road. AMCASE® worked to minimize downtime, navigated semi occupied patient care areas and addressed connectivity challenges in the space. The end result was a quality product they love and can depend on.
